Prosper Portfolio Highlights:

- Expected return on June 2016 production is slightly over 7.4% on average.

- The origination data continues the trend towards a more conservative portfolio with a greater coupon (on right.)

- Portfolio gross loss estimates relative to FICO (conservatism) remain near 2013 levels. Coupon relative to FICO (price to risk) is now between the 2013 and 2014 vintages and significantly above 2015 levels.

- Cumulative gross charge-offs are mixed. The vintages from Q1-Q3 of 2015 are all on a higher gross loss trajectory than 2014 and 2015Q3 vintages are now tracking to a lower cumulative gross loss rate than 2015Q2.

- Delinquency trends support the cumulative gross loss findings with the 2015Q3 vintage performing better than 2015Q2. The 2015Q4 vintage is in line with the 2015Q2 delinquency levels.

- Vintages originated since 2013 continue to exhibit stable pre-payment patterns that are generally lower than 2009-2012 vintages. There is also stability in cumulative pay-down curves across all vintages. (The slope of the curve decreases after month 36 for the 2009-2012 loans because the amortization schedule reflects a book of 5-year loans only. Other pools reflect the amortization of a mix of 3-year and 5-year loan terms.)
Cumulative Gross Chargeoffs measure the cumulative principal charged off for a given vintage divided by the total principal originated in that vintage. “Gross” refers to the fact that curves do not account for the post-chargeoff recovery effort that Prosper conducts on behalf of investors. Currently investors are receiving 7-8% of chargeoff principal as a result of recovery operations. There can be no guarantee that these recovery rates will remain the same in the future.

Cumulative Prepayment per Origination dollar measures the cumulative principal dollars associated with accounts that prepaid in advance of their scheduled payment schedule. The cumulative prepayment rate are calculated by dividing the cumulative dollar amount prepaid by the total original loan amount funded.

% Delinquency Per Origination Trend

The portion of Dollars 16+ Delinquent Per Origination dollar measures the cumulative principal dollars that are 16 or more days past due, and that are not charged off in a given month after origination. The measure is useful for discerning emerging delinquency trends and is a leading indicator for the Cumulative Gross Chargeoff measure.

Remaining Balance measures the cumulative principal dollars remaining in the pool that have not been charged off.
Notes & Disclaimers:

i WA Eff. Yield (also known as Coupon) shows the weighted average expected effective yield and is calculated by (i) taking the weighted average borrower interest rate for all loans originated during the period, adding (ii) estimated collected late fees and post charge-off principal recovery, and subtracting (iii) the servicing fee and estimated uncollected interest on charge-offs.

ii WA Loss (also known as Estimated Loss Rate) shows weighted average expected annualized loss rate on a loan or a group of loans and is calculated by (i) taking estimated principal loss on charge-offs from such loans.

iii WA Return (also known as Estimated IRR) shows the weighted average expected rate of return on a loan or group of loans, and is calculated by taking the WA Eff. Yield and subtracting the WA Loss.

iv Loss/FICO is a measure of risk modeling conservatism relative to traditional credit metrics. Higher numbers indicate a more conservative view on risk modeling while lower numbers indicate a less conservative approach. Indexed to 2014.

v Coupon/FICO is a measure of return relative to traditional credit metrics (FICO). Higher numbers indicate more return per unit FICO. Indexed to 2014.

Prosper’s borrower payment dependent notes (“Notes”) are offered pursuant to a prospectus filed with the SEC. Notes are not guaranteed or FDIC insured, and investors may lose some or all of the principal invested. Investors should carefully consider these and other risks and uncertainties before investing. This and other information can be found in the prospectus. Investors should consult their financial advisor if they have any questions or need additional information.

The data, statements and figures in this presentation are based on Prosper’s analysis and calculations which, in turn, are based on various data sources compiled and analyzed by Prosper with all reasonable care to ensure they contain no omission likely to affect their import.
